

On July 3rd 2005, Dan, Tammy & Chad arrived with their sleeves rolled up ready to get to work installing our new Gazebo.

Each corner is composed of two pieces to create a very sturdy framework.

Tam & Dan connect two such pieces.

Here's one guy that can't be blamed for not having the right tool for the right job!

Chad was a great help and really pitched in, helping to complete the project.

It was exciting as Mary & I watched them work and saw it coming together, piece by piece.

Tammy is getting to be quite the construction expert...

Each corner is bolted down into the concrete for a sturdy framework.

After all four corners were positioned, Chad & Dan begin installing the top frame that will hold the 'roof'

Two ladders were needed to stretch the..

...top cover over the frame and ..

attach it neatly to the frame.

LEFT: Over the primary fabric 'roof', another canopy affair is fitted with a hot air escape between the two.

RIGHT: It's shaping up nicely and is nearly complete.

LEFT: Tammy makes a few last minute adjustments hanging the netting.

RIGHT: Now we're ready to move in! We won't need our umbrella over that table now!

Who deserves a break more than these great kids who sacrificed their Sunday to get Mary, (see how happy she is) and I all set up with our new Gazebo!

There she sits folks! Very nice job and we'll certainly enjoy the conveniences it will offer. **Thanks Dan, Tammy and Chad!**
